Our Intelligence Force Is Awake

FOIAb3b

PRESIDENT EISENHOWER HAS
Americans a picture taken
by the United States' new in-
telligence force, equally assuring
of his highly sensitive and secret
field of keeping an eye on possible
enemies. A report by Sen. Norris
of New Hampshire.

The Senator, venting to his con-
stituents, gave this rundown on the
CIA intelligence Agency and some
of the techniques and tools
of the game of international hide-
and-seek.

"Ever since Sputnik, people have
been asking, 'What is the matter with
our intelligence?' This brought only
a vague response from Allen Dulles
to the effect that 'We know a bit more
about what is going on than we are
credited with knowing.' His reply
can be regarded as guarded.

"CIA must be highly secret. It re-
quires a pass to buy a candy bar at
its snack counter. Even its waste pa-
pers are classified, caught and burned
under surveillance. The question now
is answered. Not only have we been
outwitting the Reds of the Iron Cur-
tain with every delicate instrument
known to man, but for four years
our U-2's have been flying Russian

cities and taking pictures. We have
not been asleep.

"Furthermore, it proves that our
alleged 'intelligence lag' does not ex-
tend to aerial photography. In that
field we must have winners.

"Shots of launching pads and bases
from 70,000 feet have been blown up
so that every detail is clear. Actual
photos from 60,000 feet (6 1/2 miles)
distinguish telephone poles and iden-
tify articles of clothing hanging on
washlines.

"Smithsonian's satellite tracking
station has relayed pictures of small
objects taken 11,200 miles above the
earth. This is equal to photographing
a golf ball in Miami with a camera
in Boston.

"Incidentally, spy planes are prob-
ably near the end of their usefulness.
But two other satellites will be do-
ing the job. Miami, an infrared sen-
sible, watches warning systems, and
Samos, a picture-taking satellite, is
said to be our photo from 200 miles
up with 100,000 times the light of
100 feet distance.

"Long-range bombers do not fly
as high as the U-2, but they are faster,
and it is far to assure that many
ground-based missiles are being
developed. The Soviet Union is
building a missile which can
destroy a satellite in orbit.
